## **What Can Give The Horseman DigiFlex II, A Superbly Flexible Digital SLR, Even Greater Flexibility?**

---

Answer: the right Horseman accessories.

### **AC Adaptor**

If you're doing a lot of indoor shooting, the DigiFlex II AC Adaptor will pay for itself quickly in time and batteries saved. Simply connect it to the camera's battery housing and plug it into any AC outlet. A green LED will show that it's ready. Now start shooting away without ever worrying about battery life.

What's more, this AC Adaptor adjusts automatically to any AC voltage between 100 and 240 volts.

### **Long Exposure Timer**

The slowest standard speed on the DigiFlex II shutter is 1 sec. Do you need longer exposure times? Just connect this Electronic Timer to the remote release socket, set the shutter to "B," and choose any shutter speed from 2 to 32 sec.

Naturally, the Electronic Timer can also send a trigger signal to the digital camera back to activate it.

### **Waist-level Viewfinder**

Being a true SLR, the DigiFlex II is normally equipped with an eye-level viewfinder. However, there may be occasions when a waist-level viewfinder is preferable. In such cases, simply replace the eye-level prism type viewer with this compact accessory viewfinder.

Please note that the image will be right side up but left and right will be reversed.

## New Accessories for DigiFlexII SLR camera

**Product Name :** AC ADAPTER FOR 21912

**Product Code :** 21972

**Date of Sale :** December 2002

**Specifications** \_\_\_\_\_

Input Voltage : 100 - 240V AC 50/60Hz

**Product Name :** LONG EXPOSURE DEVICE FOR 21912

**Product Code :** 21973
